

**Module: Introduction****Page: W0. Introduction**

---

**W0.1****Introduction**

**Please give a general description and introduction to your organization.**

Reunert Limited is a South African company listed in the industrial goods and services (electronic and electrical equipment) sector of the JSE. The group manages a diversified portfolio of businesses in the fields of electrical engineering, information and communication technologies as well as defence and allied technologies. The group operates mainly in South Africa with minor operations situated in Australia, Lesotho, Sweden, USA and Zimbabwe. There are three main operating segments:

- CBI-electric: (African Cables, Telecom Cables and Low and Medium Voltage) which contributed 32% towards the Reunert revenue in this reporting period
- 59% of revenue was from Nashua: (Nashua Office Automation, Nashua Mobile, Nashua Communications, PanSolutions, and the asset financing business, Quince Capital)
- Reutech contributed 9% revenue: (Fuchs Electronics, Reutech Communications, Reutech Radar Systems, Reutech Solutions and RC&C Manufacturing.)

Historically, Reutech represented the defence division of Reunert, but over the past few years has successfully launched commercial products, targeting the mining and renewable energy sectors.

For the purposes of this response (Water 2015):  
The Nashua Mobile business was disposed towards the end of the reporting period and is treated as a discontinued operation in the FY2014 regulatory statements. Since Nashua Mobile operated during the period, the water data includes Nashua Mobile's contribution for the 2014 period. Reference to financial numbers therefore includes the discontinued operation and thus represents total operations for 2014.

---

**W0.2****Reporting year**

**Please state the start and end date of the year for which you are reporting data.**

**Period for which data is reported**

Tue 01 Oct 2013 - Tue 30 Sep 2014

---

**W0.3**

**Reporting boundary**

**Please indicate the category that describes the reporting boundary for companies, entities, or groups for which water-related impacts are reported.**

Companies, entities or groups over which financial control is exercised

---

**W0.4**

**Exclusions**

**Are there any geographies, facilities or types of water inputs/outputs within this boundary which are not included in your disclosure?**

Yes

---

**W0.4a**

**Exclusions**

**Please report the exclusions in the following table**

Exclusion	Please explain why you have made the exclusion
Holdings 50% and less	Only Nashua franchises in which we hold a 51% or more shareholding were included in the data information. The other franchises with a shareholding below 51% have been excluded. For our joint venture company CBI-electric: Aberdare ATC Telecom Cables we have captured all data at 50% of actual consumption.
Zimbabwe	Our Cafca operation in Zimbabwe has not been included as it is not consolidated in our financial reporting, as the directors believe there is a lack of control as defined in IAS 27 consolidated and separate Financial Statements. The amounts involved are not material to the group.
USA	The CBI-electric operation in the USA's water usage is not included. This is only a sales office and usage is insignificant for the effort required to obtain the information.

#### Further Information

### Module: Current State

#### Page: W1. Context

#### W1.1

Please rate the importance (current and future) of water quality and water quantity to the success of your organization

Water quality and quantity	Direct use importance rating	Indirect use importance rating	Please explain
Sufficient amounts of good quality freshwater available for use	Vital for operations	Have not evaluated	Reunert has more than 6000 employees working at its operations requiring fresh water for personal use and hygiene. The manufacturing plants requires a nominal amount of water in its manufacturing processes.
Sufficient amounts of recycled, brackish and/or produced water available for use	Not important at all	Have not evaluated	Reunert does not currently use brackish or seawater for any of its facilities. The majority of facilities are inland.

**W1.2**

**For your total operations, please detail which of the following water aspects are regularly measured and monitored and provide an explanation as to why or why not**

<b>Water aspect</b>	<b>% of sites/facilities/operations</b>	<b>Please explain</b>
Water withdrawals- total volumes	76-100	All operations in the business provides input on water usage apart from the exclusions listed.
Water withdrawals- volume by sources	76-100	60% of water is obtained from municipal water supply, whilst 40% water was retrieved from rainwater harvesting. Less than 0.5% of water is from boreholes.
Water discharges- total volumes	51-75	The lower number of sites reported is due to unavailability of reliable information from sites not under our control. In future these sites will be excluded as they do not fall under our financial control.
Water discharges- volume by destination	Less than 1%	Data collection on the destination of water discharges have not been included during this reporting period
Water discharges- volume by treatment method	1-25	The majority of water discharge is back into the municipal treatment system. There are four water treatment plants in the Reunert group.
Water discharge quality data- quality by standard effluent parameters	1-25	Water treatment facilities are monitored in accordance with local regulatory requirements.
Water consumption- total volume	76-100	Data collection is mainly obtained from municipal bills and represents the metered kilolitres of water used at the facilities.
Facilities providing fully-functioning WASH services for all workers	76-100	All facilities have WASH facilities.

**W1.2a**

**Water withdrawals: for the reporting year, please provide total water withdrawal data by source, across your operations**

Source	Quantity (megaliters/year)	How does total water withdrawals for this source compare to the last reporting year?	Comment
Fresh surface water	369	Higher	More complete data for period compared to prior year. Water losses were experienced due to leaks and municipal infrastructure failure. A water treatment plant used for plating has been using high amounts of water in cleaning processes. Action plans have been put in place to address unnecessary loss of water and reduce water usage at this plant by 50%.
Brackish surface water/seawater	0	Not applicable	Not used
Rainwater	246	Much higher	CBI Telecoms is a JV. Rainwater harvesting was installed in 2012. The 246 ML represents 50% of rainwater collected during the reporting period. An increase of 66% in water used from rainwater tanks, but measurements include water tanks topped up with municipal water.
Groundwater - renewable	2.5	Much lower	The 60% reduction reported for water retrieved from boreholes, is likely due to under reporting and insufficient measuring. Due to small amounts (only 0.5% of total water consumption) this was not ranked as a high priority to investigate.
Groundwater - non-renewable	0	Not applicable	Not relevant
Produced/process water	0	Not applicable	Data received from our operations requires further analysis and clarification on how much is recycled water vs process water.
Municipal supply	369	Higher	A 10% increase in water is due to more complete water reporting, including assumptions where data was unavailable in the prior period. Water leakages and inefficient water management process at the plating facility at CBI-electric facilities have also contributed to the higher usage.
Wastewater from another organization	0	Not applicable	No wastewater is used from another organisation
Total	616	Higher	A slight increase in water withdrawals is due to more facilities included in the reporting period compared to the prior year.

**W1.2b**

**Water discharges: for the reporting year, please provide total water discharge data by destination, across your operations**

Destination	Quantity (megaliters/year)	How does total water discharged to this destination compare to the last reporting year?	Comment
Fresh surface water	0	Not applicable	Uncertain if any fresh surface water is discharged.
Brackish surface water/seawater	0	Not applicable	Not relevant
Groundwater	0	Not applicable	Not measured
Municipal treatment plant	366	Not applicable	More complete data based on assumptions. At a number of sites water supply data was available while effluent data was lacking. In these cases effluent was estimated at 50% of water supply.
Total	366	Higher	More complete data based on assumptions. At a number of sites water supply data was available while effluent data was lacking. In these cases effluent was estimated at 50% of water supply.

#### W1.2c

**Water consumption: for the reporting year, please provide total water consumption data, across your operations**

Consumption (megaliters/year)	How does this consumption figure compare to the last reporting year?	Comment
616	Higher	An 8% increase in water consumption is mainly due to more complete water reporting, including assumptions where data was unavailable. 67% of municipal water is used by CBI-electric. Leakage and inefficient water usage at this segment has been addressed during the period. Certain data gaps however still exist.

---

**W1.3**

Do you request your suppliers to report on their water use, risks and/or management?

---

**W1.3a**

Please provide the proportion of suppliers you request to report on their water use, risks and/or management and the proportion of your procurement spend this represents

Proportion of suppliers %	Total procurement spend %	Rationale for this coverage
---------------------------	---------------------------	-----------------------------

---

**W1.3b**

Please choose the option that best explains why you do not request your suppliers to report on their water use, risks and/or management

Primary reason	Please explain
----------------	----------------

---

**W1.4**

Has your organization experienced any detrimental impacts related to water in the reporting period?

No

---

W1.4a

Please describe the detrimental impacts experienced by your organization related to water in the reporting year

Country	River basin	Impact indicator	Impact	Description of impact	Length of impact	Overall financial impact	Response strategy	Description of response strategy
---------	-------------	------------------	--------	-----------------------	------------------	--------------------------	-------------------	----------------------------------

---

W1.4b

Please choose the option below that best explains why you do not know if your organization experienced any detrimental impacts related to water in the reporting year and any plans you have to investigate this in the future

Primary reason	Future plans
----------------	--------------

---

**Further Information**

**Module: Risk Assessment**

**Page: W2. Procedures and Requirements**

---

**W2.1**

**Does your organization undertake a water-related risk assessment?**

Water risks are assessed

---

**W2.2**

**Please select the options that best describe your procedures with regard to assessing water risks**

Risk assessment procedure	Coverage	Scale	Please explain
Comprehensive company-wide risk assessment	Direct operations	All facilities	Reunert has an established and separate Risk Committee, ensuring a focussed review of risk identification and management processes. The ISO 31000 framework is used. Key risk classes are: a) Governance and reputation – the risk that adverse publicity regarding Reunert’s business practices, associations and market conduct, whether accurate or not, will cause a loss of confidence. b) Strategy and planning - the risk that the strategy is inappropriate or not implemented. c) Operations/infrastructure – the risk that there is a loss as a result of inadequate or failed internal processes, people, systems or external events. d) Compliance – the risk of not complying with laws, regulations and rules including core values and code of conduct. e) Reporting – the risk that effective reporting does not take place including reporting errors or omissions in the annual financial statements or integrated report. Any climate change risks at an asset level would be assessed in the same way as at company level. Facilities in the group do not use significant amounts of water in its manufacturing processes. Water supply has been identified as a low risk based on impact and likelihood of occurring.

---

**W2.3**

**Please state how frequently you undertake water risk assessments, what geographical scale and how far into the future you consider risks for each assessment**

Frequency	Geographic scale	How far into the future are risks considered?	Comment
Sporadically not defined	Business unit	1 to 3 years	An in-depth water risk assessment has not been done for the group. Interruptions in water supplies have been identified as an immediate risk that would apply at facility level and will only be applicable to the local area.

#### W2.4

Have you evaluated how water risks could affect the success (viability, constraints) of your organization's growth strategy?

Not evaluated

#### W2.4a

Please explain how your organization evaluated the effects of water risks on the success (viability, constraints) of your organization's growth strategy?

#### W2.4b

What is the main reason for not having evaluated how water risks could affect the success (viability, constraints) of your organization's growth strategy, and are there any plans in place to do so in the future?

Main reason	Current plans	Timeframe until evaluation	Comment
-------------	---------------	----------------------------	---------

Main reason	Current plans	Timeframe until evaluation	Comment
Important but not any immediate business priority	No	Next 24-36 months	Water risks were not deemed a major risk. As the group's sustainability policy and strategy is developed further, and with the inclusion of an analysis of the supply chain, it is likely that risks might be better defined.

## W2.5

Please state the methods used to assess water risks

Method	Please explain how these methods are used in your risk assessment
Internal company knowledge Regional government databases	All Group companies conduct formal risk assessments annually. Environmental risk assessments have been conducted at a number of our manufacturing plants. These assessments focus on generic environmental impacts and risks, but does include compliance risks such as contaminated water from the site which could lead to soil, surface water and ground water contamination as well as health and safety risks, i.e. water pressure and fire risks. Climate change outcomes with reduced rainfall and higher temperatures could impact on availability of water. Social unrest is growing in communities where access to water supplies are deteriorating due to neglect in the upkeep of infrastructure.

## W2.6

Which of the following contextual issues are always factored into your organization's water risk assessments?

Issues	Choose option	Please explain
Current water availability and quality parameters at a local level	Relevant, included	Current water quality and quantity meet our foreseeable demand. Interruption in service delivery will impact on manufacturing operations and certain actions such as installation of

Issues	Choose option	Please explain
		water reservoir tanks have been taken to ensure own water supplies, but will provide sufficient supplies for a limited period only.
Current water regulatory frameworks and tariffs at a local level	Relevant, included	Compliance to local regulations and payment of tariffs are included in risk reviews and are provided for in our budgets.
Current stakeholder conflicts concerning water resources at a local level	Relevant, not yet included	An assessment of stakeholder concerns on water resources has been limited to water supply to our own operations. Engagement with local communities would be considered in our sustainability strategy.
Current implications of water on your key commodities/raw materials	Relevant, not yet included	The risk relating to insufficient water pressure for fire defence has been evaluated and is our biggest immediate water related risk. It is relevant at our CBI-electric manufacturing plants.
Current status of ecosystems and habitats at a local level	Not relevant, included	None of our water is drawn from any recognised Ramsar wetland or nature reserves in South Africa.
Current river basin management plans	Relevant, included	Maintaining water permits for water discharge is important to a number of our facilities. A general knowledge on the availability of water in areas in which we operate are considered in risk assessments.
Current access to fully-functioning WASH services for all employees	Relevant, included	The health and safety of all our employees are held in high regard and access to water treated as a basic work condition. All our employees have access to water supply, adequate sanitation and hygiene. Shower facilities are also provided to employees at our manufacturing plants.
Estimates of future changes in water availability at a local level	Relevant, included for some facilities/suppliers	Current water quality and quantity meet our foreseeable demand. Interruption in service delivery will impact on manufacturing operations and certain actions have been taken to ensure own water supplies for a limited period only. The impact over longer term would require closer analysis. Scarcity of water might lead to higher water prices in future which will impact on operating costs.
Estimates of future potential regulatory changes at a local level	Relevant, not yet included	Potential regulatory changes have not been included in the prior year assessment.
Estimates of future potential stakeholder conflicts at a local level	Relevant, not yet included	Social unrest due to water scarcity is likely to rate higher on risk assessments. However, our operations are based in the large metros in Gauteng, Western Cape and KwaZulu Natal, and are not as exposed to failing infrastructure as is being seen at smaller municipalities.
Estimates of future implications of water on your key commodities/raw materials	Not evaluated	No thorough evaluation has been completed in the reporting period
Estimates of future potential changes in the status of ecosystems and habitats at a local level	Not evaluated	The need to protect our fresh water ecosystems is acknowledged.
Scenario analysis of availability of sufficient quantity and quality of water	Relevant, included for some facilities/suppliers	Current water quality and quantity meet our foreseeable demand. However, if there are any interruptions in service delivery this could impact on manufacturing operations. Management

Issues	Choose option	Please explain
relevant for your operations at a local level		plans will include actions to ensure own water supplies, but for a limited period only. The impact over longer term would require closer analysis.
Scenario analysis of regulatory and/or tariff changes at a local level	Relevant, not yet included	Increased tariffs for water supply will impact on operating costs.
Scenario analysis of stakeholder conflicts concerning water resources at a local level	Not evaluated	For consideration in our sustainability strategy
Scenario analysis of implications of water on your key commodities/raw materials	Not evaluated	No immediate risks have been identified, but longer-term impacts should be considered
Scenario analysis of potential changes in the status of ecosystems and habitats at a local level	Not evaluated	No immediate risks have been identified, but longer-term impacts should be considered
Other	Not evaluated	Only once a thorough assessment has been done group-wide could additional factors for consideration be listed.

## W2.7

**Which of the following stakeholders are always factored into your organization's water risk assessments?**

Stakeholder	Choose option	Please explain
Customers	Not evaluated	Sufficient water supply has not been rated as a material risk in continuing doing our business.
Employees	Relevant, included	Limited engagement has taken place. Continued clean water supply at the work environment for consumption by employees is taken for granted and is provided. However, some of our employees might live in areas where water supplies are not readily available or gets interrupted due to lack of service delivery. This might impact on hygiene-sanitation concerns resulting in employees staying away from work.
Investors	Relevant, included	Reunert regularly responds to sustainability assessments such as CDP Water assessment; ESG surveys and in management conversations on how our shareholders view sustainability risks in evaluating our business. Our reporting covers these aspects.

Stakeholder	Choose option	Please explain
Local communities	Relevant, not yet included	The right water is contained in the SA Constitution and access to clean water is regarded as a high priority by local communities. Local communities have not yet been included in our water assessments.
NGOs	Relevant, not yet included	Reunert's CSI focus is on education (maths and science) in particular as well as the Nashua Children's Charity Foundation (NCCF) that assists more than 70 charities looking after orphans and vulnerable children. Over time we have received proposals to assist with water-related projects, but have not yet included into our outreach programmes as a separate focus area.
Other water users at a local level	Not evaluated	Not considered.
Regulators	Relevant, not yet included	All operations are required to comply with regulations. Reunert is currently assessing its role and the contribution it could make in policy setting.
River basin management authorities	Not evaluated	Reunert has not actively engaged with river basin management, mainly because we are not a big user of water resources in our business.
Statutory special interest groups at a local level	Not evaluated	Reunert has not been involved with special interest groups.
Suppliers	Relevant, not yet included	More analysis is required on what the potential impact can be. Currently a dual or multi-supply strategy is followed for most of our critical components and materials. The longer-term impact requires further consultation with suppliers to assess potential impacts.
Water utilities/suppliers at a local level	Relevant, included	The interruption of water supplies can impact on productivity and output of manufactured goods. Discussion to repair damaged infrastructure has taken place. Consultation on the issuing of water permits have also taken place.
Other	Not evaluated	No additional stakeholders have been identified.

## W2.8

Please choose the option that best explains why your organisation does not undertake a water-related risk assessment

Primary reason	Please explain
----------------	----------------

---

**Further Information**

**Module: Implications**

**Page: W3. Water Risks**

---

**W3.1**

**Is your organization exposed to water risks, either current and/or future, that could generate a substantive change in your business, operations, revenue or expenditure?**

No

---

**W3.2**

**Please provide details as to how your organization defines substantive change in your business, operations, revenue or expenditure from water risk**

Reunert is a diversified business with a wide range of products, services and different customer segments. This diversified nature currently safeguards the group against concentrated risk to its customers and different business sectors. Reunert however is largely exposed to Southern Africa geography with some 90% of revenue earned from here. If water scarcity in this region becomes severe and Reunert has not diversified its regional revenue streams this could impact on business in the longer term. Regulatory water risks could have an impact on manufacturing processes which represents some 40% of the business on a revenue basis. This is currently seen as an insignificant risk and necessary steps have been taken to mitigate these risks. Increased costs in water supplies will have an impact on operating costs.

---

**W3.2a**

**Please provide the number of facilities\* per river basin exposed to water risks that could generate a substantive change in your business, operations, revenue or expenditure and the proportion of total operations this represents**

Country	River basin	Number of facilities	Proportion of total operations exposed to risk within river basin (%)	Comment
---------	-------------	----------------------	---	---------

---

**W3.2b**

Please provide the proportion of financial value that could be affected at river basin level associated with the facilities listed in W3.2a

Country	River basin	Financial reporting metric	Proportion of chosen metric that could be affected within the river basin	Comment
---------	-------------	----------------------------	---	---------

---

**W3.2c**

Please list the inherent water risks that could generate a substantive change in your business, operations, revenue or expenditure, the potential impact to your direct operations and the strategies to mitigate them

Country	River basin	Risk driver	Potential impact	Description of impact	Timeframe	Likelihood	Magnitude of potential financial impact	Response strategy	Costs of response strategy	Details of strategy and costs
---------	-------------	-------------	------------------	-----------------------	-----------	------------	---	-------------------	----------------------------	-------------------------------

---

**W3.2d**

Please list the inherent water risks that could generate a substantive change in your business operations, revenue or expenditure, the potential impact to your supply chain and the strategies to mitigate them

Country	River basin	Risk driver	Potential impact	Description of impact	Timeframe	Likelihood	Magnitude of potential financial impact	Response strategy	Costs of response strategy	Details of strategy and costs
---------	-------------	-------------	------------------	-----------------------	-----------	------------	---	-------------------	----------------------------	-------------------------------

**W3.2e**

Please choose the option that best explains why you do not consider your organization to be exposed to water risks in your direct operations that could generate a substantive change in your business, operations, revenue or expenditure

Primary reason	Please explain
Risks exist, but no substantive impact anticipated	Reunert is not a significant user of water and limited water compared o other industries are required during production processes at our manufacturing operations. To further reduce water usage; water recycling and treatment takes place at these plants to ensure better efficiencies.

**W3.2f**

Please choose the option that best explains why you do not consider your organization to be exposed to water risks in your supply chain that could generate a substantive change in your business, operations, revenue or expenditure

Primary reason	Please explain
Risks exist, but no substantive impact anticipated	More in-depth analysis is required to assess the potential risks in the longer-term.

W3.2g

Please choose the option that best explains why you do not know if your organization is exposed to water risks that could generate a substantive change in your business operations, revenue or expenditure and discuss any future plans you have to assess this

Primary reason	Future plans
----------------	--------------

**Further Information**

**Page: W4. Water Opportunities**

W4.1

**Does water present strategic, operational or market opportunities that substantively benefit/have the potential to benefit your organization?**

No

W4.1a

Please describe the opportunities water presents to your organization and your strategies to realize them

Country or region	Opportunity	Strategy to realize opportunity	Estimated timeframe	Please explain
-------------------	-------------	---------------------------------	---------------------	----------------

**W4.1b**

**Please choose the option that best explains why water does not present your organization with any opportunities that have the potential to provide substantive benefit**

Primary reason	Please explain
Opportunities exist, but nothing substantive	Business opportunities to supply products included in water treatment plants exist, but is not regarded as a significant opportunity currently.

**W4.1c**

**Please choose the option that best explains why you do not know if water presents your organization with any opportunities that have the potential to provide substantive benefit**

Primary reason	Please explain
----------------	----------------

---------------------------	---------	-------------	---------------	--	---	--

**Further Information**

**Page: W5. Facility Level Water Accounting (II)**

W5.1a

Water withdrawals: for the reporting year, please provide withdrawal data, in megaliters per year, for the water sources used for all facilities reported in W5.1

Facility reference number	Fresh surface water	Brackish surface water/seawater	Rainwater	Groundwater (renewable)	Groundwater (non-renewable)	Produced/process water	Municipal water	Wastewater from another organization	Comment
---------------------------	---------------------	---------------------------------	-----------	-------------------------	-----------------------------	------------------------	-----------------	--------------------------------------	---------

---

**W5.2**

Water discharge: for the reporting year, please complete the table below with water accounting data for all facilities included in your answer to W3.2a

Facility reference number	Total water discharged (megaliters/year) at this facility	How does the total water discharged at this facility compare to the last reporting year?	Please explain the change if substantive
---------------------------	---	--	--

---

**W5.2a**

Water discharge: for the reporting year, please provide water discharge data, in megaliters per year, by destination for all facilities reported in W5.2

Facility reference number	Fresh surface water	Municipal Treatment Plant	Seawater	Groundwater	Comment
---------------------------	---------------------	---------------------------	----------	-------------	---------

---

**W5.3**

Water consumption: for the reporting year, please provide water consumption data for all facilities reported in W3.2a

Facility reference number	Consumption (megaliters/year)	How does this compare to the last reporting year?	Please explain the change if substantive
---------------------------	-------------------------------	---	--

---

**W5.4**

For all facilities reported in W3.2a what proportion of their water accounting data has been externally verified?

Water aspect	% verification	What standard and methodology was used?
--------------	----------------	---

---

**Further Information**

**Module: Response**

**Page: W6. Governance and Strategy**

---

**W6.1**

Who has the highest level of direct responsibility for water within your organization and how frequently are they briefed?

Highest level of direct responsibility for water issues	Frequency of briefings on water issues	Comment
Individual/Sub-set of the Board or other committee appointed by the Board	Sporadic-as important matters arise	Water has not been ranked as a high risk in the Group's risk assessment. The Risk Committee assess group risks on a regular basis Water usage is monitored and data is included in annual reporting such as sustainability reporting which is presented to the Social, Ethics and Transformation Committee for approval prior to publishing. The majority of our manufacturing businesses are ISO14001 certified which will cover responsible water management.

---

**W6.2**

**Is water management integrated into your business strategy?**

No

---

W6.2a

Please choose the option(s) below that best explain how water has positively influenced your business strategy

Influence of water on business strategy	Please explain
---	----------------

---

W6.2b

Please choose the option(s) below that best explains how water has negatively influenced your business strategy

Influence of water on business strategy	Please explain
---	----------------

---

W6.2c

**Please choose the option that best explains why your organization does not integrate water management into its business strategy and discuss any future plans to do so**

Primary reason	Please explain
Under review/in progress	Reunert complies with regulatory environmental requirements and to that extent water management is addressed. Water efficiencies will be covered as part of the Group's focus on its Efficiency Strategic Pillar.

**W6.3**

**Does your organization have a water policy that sets out clear goals and guidelines for action?**

No

**W6.3a**

Please select the content that best describes your water policy (tick all that apply)

Content	Please explain why this content is included

**W6.4**

**How does your organization's water-related capital expenditure (CAPEX) and operating expenditure (OPEX) during the most recent reporting period compare to the previous reporting period?**

Water CAPEX (+/- % change)	Water OPEX (+/- % change)	Motivation for these changes
0	0	Due to insufficient resources, the insignificant contribution to other Capex and the complexity of the group, aggregate information that are comparable were not available during this reporting period. Operational spend is tracked but due to incompleteness in reporting is not included.

**Further Information**

**Page: W7. Compliance**

**W7.1**

**Was your organization subject to any penalties, fines and/or enforcement orders for breaches of abstraction licenses, discharge consents or other water and wastewater related regulations in the reporting year?**

No

**W7.1a**

Please describe the penalties, fines and/or enforcement orders for breaches of abstraction licenses, discharge consents or other water and wastewater related regulations and your plans for resolving them

Facility name	Incident	Incident description	Frequency of occurrence in reporting year	Financial impact	Currency	Incident resolution
---------------	----------	----------------------	---	------------------	----------	---------------------

**W7.1b**

What proportion of your total facilities/operations are associated with the incidents listed in W7.1a

---

W7.1c

Please indicate the total financial impacts of all incidents reported in W7.1a as a proportion of total operating expenditure (OPEX) for the reporting year. Please also provide a comparison of this proportion compared to the previous reporting year

Impact as % of OPEX	Comparison to last year
---------------------	-------------------------

---

**Further Information**

**Page: W8. Targets and Initiatives**

---

W8.1

**Do you have any company wide targets (quantitative) or goals (qualitative) related to water?**

No

---

W8.1a

Please complete the following table with information on company wide quantitative targets (ongoing or reached completion during the reporting period) and an indication of progress made

Category of target	Motivation	Description of target	Quantitative unit of measurement	Base-line year	Target year	Proportion of target achieved, % value
--------------------	------------	-----------------------	----------------------------------	----------------	-------------	--

---

**W8.1b**

Please describe any company wide qualitative goals (ongoing or reached completion during the reporting period) and your progress in achieving these

Goal	Motivation	Description of goal	Progress
------	------------	---------------------	----------

---

**W8.1c**

**Please explain why you do not have any water-related targets or goals and discuss any plans to develop these in the future**

Reunert's water consumption is not extensive and our impact on water resources has been regarded as low. Economic and Societal risks still ranks much higher in South Africa than Environmental risks; including water. Climate change and looming water shortages should however not be ignored and is expected to rank higher in risk assessments in the longer term.

Reunert's strategic goals, which were formulated earlier in 2015, includes operating as a responsible South African corporate citizen with a strong set of values. In addition, Efficiency is one of the strategic pillars and will cover responsible water management.

A sustainability policy and strategy is in the design phase and will cover setting of targets in key areas.

---

**Further Information**

**Module: Linkages/Tradeoff**

**Page: W9. Managing trade-offs between water and other environmental issues**

---

**W9.1**

Has your organization identified any linkages or trade-offs between water and other environmental issues in its value chain?

No

---

**W9.1a**

Please describe the linkages or trade-offs and the related management policy or action

Environmental issues	Linkage or trade-off	Policy or action
----------------------	----------------------	------------------

Name	Job title	Corresponding job category
Carina de Klerk	Investor Relations and Communications Manager	Public affairs manager

---

**W10.2**

**Addressing water risks effectively, in many instances, requires collective action. CDP would like to support you in finding potential partners that are also working to tackle water challenges in the river basins you report against. Please select if your organization would like CDP to transfer your publicly disclosed risk and impact drivers and response strategy data from questions W1.4a, W3.2b, W3.2c, W4.1a and W8.1b to the United Nations Global Compact Water Action Hub.**

Yes
